Features

- Genuine and non-flammable CO gas
- Fast test and re-set time
- Detector manufacturer endorsed
- Designed for use with system monitored CO detectors
- UL classified
- Only CO tester approved for System Sensor 1224T / A / R CO detectors & Interlogix SpaceAir 250 CO Alarms
- Controllable and safe CO detector testing
- Compatible with dispenser use to test multi-criteria/CO Fire detectors and alarms

Description

Solo C6™ provides a fast and simple way of meeting the requirements of CO detector testing legislation by introducing real CO to the sensing cell of the detector. As the world's first UL Classified CO detector tester, Solo C6 is the professionals' choice for ultimate peace of mind in ensuring the detector is functioning correctly and protecting the lives of those around it.

Carbon monoxide (CO) is an odorless, colorless, tasteless and highly toxic gas. CO is produced from devices such as heating systems and power tools that fail to function correctly or are not properly vented.

Fire industry standards require the installation of Carbon Monoxide Detectors in residential and commercial buildings, hotels, dormitories, day care centers, schools, hospitals, assisted-living facilities and nursing homes.

CO detectors protect lives by sampling the air and measuring the amount of CO present over a time period. If a dangerous level of CO is detected the detector will enter into alarm.

Technical Specifications

Case Size	12 cans, 10 oz each
