Potter Security: Protection at the Perimeter

Keeping criminals off your premises is the best way to keep your building safe. However, when criminals do appear, you want to make certain you have a sure means of detecting them. Potter's Perimeter Protection devices provide an easy way detect, alert, and protect, from the fence all the way to the door.

Our fence sensors will alert your security control systems when someone tries to climb over or cut through, and our PIR motion detectors will detect any intruders who make it near the building. Our various types of magnetic contacts provide a last line of defense to notify you of a perimeter breach. Our sirens and strobes alone will provide enough commotion to scare most intruders away.

Initiating Devices

Potter produces a variety of high quality initiating devices to fulfill many applications. Detecting intruders as quickly as possible is the best way to keep your people and property protected.

Notification Devices

Potter initiating devices can be tied to intruder detection systems or directly to notification devices. These devices provide immediate audio/visual notification of a potential intruder.

Collectively, Potter Perimeter Protection devices provide a solid defense against intruders and keep your property safe.
