Code Requirements Regarding Intelligibility

Code Requirements Regarding Intelligibility

NFPA 72 Addresses Intelligibility:

- + Intelligibility is a Defined Term [3.3.144]
 - “Quality or condition of being intelligible.” [See 3.3.145]
- + Acoustically Distinguishable Spaces (ADS) [3.3.6]
- + Prerecorded and manual voice messages shall be intelligible per Chapter 18 [14.4.11]
 - Not required to be Quantitative

Code Requirements Regarding Intelligibility

NFPA 72 Addresses Intelligibility:

- + Voice messages may not meet sound pressure (dB) levels of audibility requirements [18.4.1.6]
- + Intelligibility required where a system designer states the ADS must have voice intelligibility [18.4.11]
 - ADS must be documented
 - Intelligibility not required in all ADS

7 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Code Requirements Regarding Intelligibility

NFPA 72 Addresses Intelligibility:

- + Systems shall be capable of voice intelligibility [24.3.1.1]
 - Prerecorded, synthesized, or live microphone, live telephone handset, and live radio
- + Non-listed loudspeakers shall be permitted to achieve intelligibility [24.3.1.2]

8 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Code Requirements Regarding Intelligibility

NFPA 72 Addresses Intelligibility:

- + Loudspeaker layout shall be designed to ensure intelligibility and audibility [24.4.2.2.1(1)]
 - Shall consider required level of audibility [24.4.2.2.1(2)]
- + Intelligibility shall require a fire alarm system/ECS to deactivate all audible and visual notification that interferes with intelligibility [24.5.22.1.3]

9 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Code Requirements Regarding Intelligibility

Global Change to NFPA 72-2019

Two Related Terms are Now Applied Consistently Throughout:

- + Speaker
- + Loudspeaker

Changes High Power Speaker Array (HPSA) to High Power Loudspeaker Array (HPLA)

10 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Code Requirements Regarding Intelligibility

History of Allowance of Nonlisted Loudspeakers

- + Not allowed in 2010 or 2013 Edition

24.4.2.12.3 Where no listed device exists for the detection required by the emergency response plan, nonlisted devices shall be permitted to be used if their failure will not impair the operation of the mass notification system.

- + 2016 Edition: New 24.3.1.2

- “Where no listed loudspeaker exists to achieve...”

24.3.1.2* Where no listed loudspeaker exists to achieve the intelligibility requirements of the Code for a notification zone, nonlisted loudspeakers shall be permitted to be installed to achieve the intelligibility for that notification zone.

- + 2019 Edition: Revised 24.3.1.2

- “Where listed loudspeakers do not achieve...”

24.3.1.2* Where listed loudspeakers do not achieve the intelligibility requirements of the Code for a notification zone, nonlisted loudspeakers shall be permitted to be installed to achieve the intelligibility for that notification zone.

Code Requirements Regarding Intelligibility

Reminder of Loudspeaker Listings:

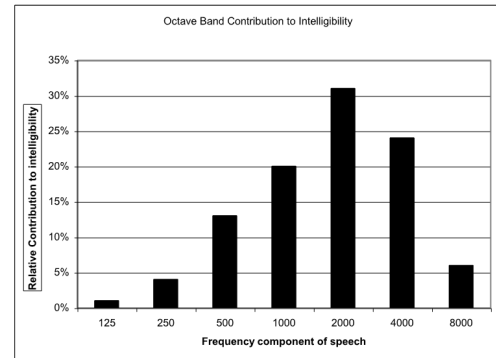

- + UL 1480 Speakers for Fire Alarm and Signaling Systems, Including Accessories
 - Edition 6, January 28, 2016
 - Uses the Reverberant Chamber Test
 - Applies to speakers rated at 300 V or less, for fire alarm and signaling systems and intended for indoor and/or outdoor installation.
 - Does “not” cover speakers which are intended for commercial or professional audio applications (see UL 1480A, UL 1492, UL 6500, UL 813, UL 1419, UL 2017, and the like)
- + CAN/ULC-S541 Speakers for Fire Alarm Systems, Including Accessories
 - Uses the Anechoic Chamber Test

Code Requirements Regarding Intelligibility

UL 1480 Audibility

- + Confirmed for Audible Output of 75 dBA or greater
 - Measured at 1 Watt at 10 ft (sensitivity)
 - Powered from a source of pink noise
 - Over a range of 400 Hz – 4,000 Hz.
- + Human Speech
 - Ranges over seven octaves from 125 Hz to 8,000 Hz
 - Majority of intelligibility falling between 500 Hz – 4,000 Hz
 - Sounds that make up words is created by amplitude modulation of those frequencies

Code Requirements Regarding Intelligibility

Annex D – Speech Intelligibility

Speech Intelligibility

ANNEX

D

- + Added in 2010 Edition, Updated Since Then
- + Based on NFPA Fire Protection Research Foundation project in October 2008
- + Includes guidance on the planning, design, installation, and testing of voice communication systems
 - Test protocols, limitations and concerns
 - Acoustically Distinguishable Spaces
 - Quantitative Measurements (STI, CIS, ALCons, etc.)
- + Article: “Voice Intelligibility for Emergency Voice/Alarm Communications Systems”
 - Available only in the NFPA 72 Handbook

Voice Intelligibility for Emergency Voice/Alarm Communications Systems

Robert P. Schifiliti, P.E., FSFPE

Practical Suggestions for Improving Loudspeaker Design

Practical Suggestions for Improving Loudspeaker Design

Understand What May Effect System Intelligibility?

- + Voice Generator / Signal Source
- + Message Recording Quality / Method
- + Signal Processing
- + Amplifier
- + Circuiting
- + Loudspeaker Placement
- + Loudspeaker Equipment

**GREATEST IMPACT BY
SYSTEM DESIGNER!**

Practical Suggestions for Improving Loudspeaker Design

Common Acoustic Properties

- + Floor
 - Carpet
 - Tile
- + Ceilings
 - Height
 - Acoustical Ceiling Tile / Hard Lid
 - Cloud Ceilings
- + Walls
 - Glass / Curtain Wall
 - Drywall / Brick
 - Fabric

Common Environmental or Use Properties

- + Occupancy Load
- + Mechanical Equipment
- + Workshops / Plants / Mills
- + Existence of Sound Sources
- + Acoustically Challenging Spaces

19 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

25 Vrms vs. 70.7 Vrms

- + Most loudspeakers are dual voltage
- + 25Vrms:
 - Good for smaller facilities
 - Typically requires 12, 14, or 16 AWG
- + 70.7Vrms:
 - Reduces the current and power loss
 - Typically use 16 or 18 AWG wiring
 - Loudspeakers may have more power taps
 - Can be added onto more easily
 - Circuits may require conduit

| ALLOWABLE LENGTH (FEET) FOR 25 VRMS AUDIO CIRCUITS WITH 0.5dB (12.5%) LOSS | | | | | | | |
|--|----------------------------------|---|----------|----------|----------|----------|------------|
| WIRE SIZE (AWG) | RESISTANCE PER 1000' PAIR (OHMS) | NOMINAL POWER IN LOAD (load impedance ohms) | | | | | |
| | | 10W (61) | 15W (41) | 20W (31) | 30W (20) | 40W (15) | 50W (12.5) |
| 12 | 3.2 | 1130 | 775 | 575 | 390 | 290 | 230 |
| 14 | 5.2 | 700 | 475 | 350 | 240 | 175 | 140 |
| 16 | 8.0 | 450 | 300 | 225 | 150 | 110 | 90 |
| 18 | 13.0 | 290 | 190 | 140 | 95 | 70 | 57 |

| ALLOWABLE LENGTH (FEET) FOR 70 VRMS AUDIO CIRCUITS WITH 0.5dB (12.5%) LOSS | | | | | | | | | |
|--|--|---|--------------|--------------|--------------|--------------|-------------|--------------|----------------|
| WIRE SIZE (AWG) | RESISTANCE PER 1000' PAIR (OHMS) | NOMINAL POWER IN LOAD (load impedance ohms) | | | | | | | |
| | | 10W (490) | 15W (327) | 20W (245) | 30W (163) | 40W (122) | 60W (81) | 100W (49) | 200W (24.5) |
| 10 | 2.0 | 9900 | 9900 | 7300 | 5000 | 3700 | 2500 | 1450 | 730 |
| 12 | 3.2 | 9100 | 6200 | 4600 | 3100 | 2300 | 1600 | 910 | 460 |
| 14 | 5.2 | 5600 | 3800 | 2800 | 1900 | 1400 | 950 | 560 | 280 |
| 16 | 8.0 | 3600 | 2400 | 1800 | 1200 | 900 | 600 | 370 | 180 |
| 18 | 13.0 | 2300 | 1500 | 1100 | 750 | 560 | 370 | 230 | |

Decide BEFORE Starting the Design and Document!

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 1: Understand the Inverse Square Law

- + Double the distance, sound intensity will diminish by 6 decibels (dB)
- + Increasing the power to a loudspeaker will not change this law
 - Increasing power may increase distortion!
- + Select loudspeakers with sufficient efficiency or higher sensitivity
- + More efficient the speaker, the lower the amplifier power required to achieve the same sound pressure level

Speaker efficiency is more important than power handling!

Graphic Courtesy: Quam Nichols Company; Chicago, IL

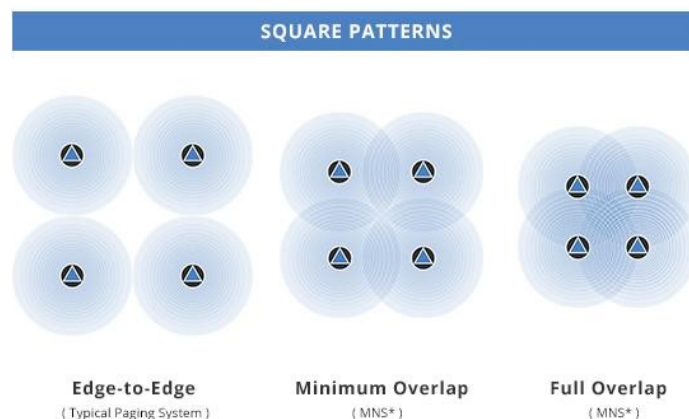

21 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 2: Coverage – Not Power

- + Should be no 'dead' spots
- + 'Minimum' to 'Full Overlap' is recommended
- + Remember to consider the room's acoustic properties

Intelligibility Increases with Coverage – Not Power!

Graphic Courtesy: Quam Nichols Company; Chicago, IL

22 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 3: Speaker Placement is Critical

- + Don't rely on audio reflection for coverage
- + Position loudspeakers for 100% coverage at listening height
- + Lower ceilings will have closer spacing
- + ADS definition must include ceiling height

Speaker Placement is Critical to Effective Coverage!

Graphic Courtesy: Quam Nichols Company; Chicago, IL

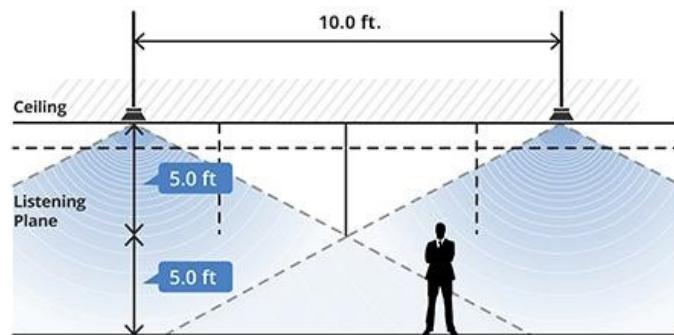

23 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 4: Understand the Listening Plane

- + Need 100% coverage at the listening plane
- + No more than 6 dB loss from each source
- + Design for minimum to full coverage, not edge-to-edge

Graphic Courtesy: Quam Nichols Company; Chicago, IL

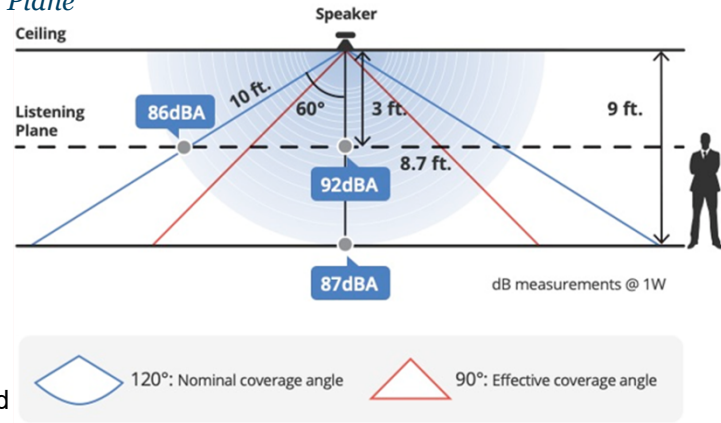

24 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 4: Understand the Listening Plane

- + Need 100% coverage at the listening plane
- + No more than 6 dB loss from each source
- + Design for minimum to full coverage, not edge-to-edge
- + Strike a balance between nominal and effective coverage angles.

Intelligibility Requires Effective and Balanced Coverage!

Graphic Courtesy: Quam Nichols Company; Chicago, IL

25 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 5: Wall-Mounted Loudspeakers

- + Advantages:
 - For corridors, fewer speakers and less amplifier power may be needed
 - Mounting can be on more than one wall
 - Places sound directly into the listener area
 - Combination speaker/strobe units permit the installation of one appliance

Graphic and Content Courtesy: NEMA SB 50-2014S © 2014 National Electrical Manufacturers Association & Fire Alarm Audio Applications Guide © 2005 Tyco Safety Products

26 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 5: Wall-Mounted Loudspeakers

- + Disadvantages:
 - Sound field more likely to encounter obstructions and changes to intelligibility
 - Low, hard ceilings reverberate sound off the ceiling and down to the listener, thus reducing intelligibility
 - Need to calculate loudspeaker distribution differently

Graphic and Content Courtesy: NEMA SB 50-2014S © 2014 National Electrical Manufacturers Association & Fire Alarm Audio Applications Guide © 2005 Tyco Safety Products
 27 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 5: Wall-Mounted Loudspeakers

- + Loudspeaker design depends on the listener location in the room
- + Calculations must be done with the listener at the farthest distance from the speaker
- + Farthest distance is 3 feet off of the opposite wall

Graphic and Content Courtesy: NEMA SB 50-2014S © 2014 National Electrical Manufacturers Association & Fire Alarm Audio Applications Guide © 2005 Tyco Safety Products
 28 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 5: Wall-Mounted Loudspeakers

- + Goal is still to minimize sound pressure level variations in the protected area
- + Loudspeaker coverage may require coverage overlap patterns

| Wall-Mounted Speakers (In Feet) | |
|---------------------------------|--|
| Room Width | Coverage Width 3 Feet from Wall Opposite Speaker |
| 10 Feet | 18 Feet |
| 12 Feet | 23 Feet |
| 14 Feet | 28 Feet |
| 16 Feet | 33 Feet |
| 18 Feet | 38 Feet |
| 20 Feet | 44 Feet |

Graphic and Content Courtesy: NEMA SB 50-2014S © 2014 National Electrical Manufacturers Association & Fire Alarm Audio Applications Guide © 2005 Tyco Safety Products

29 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 5: Wall-Mounted Loudspeakers

- + Preference is to use a single row pattern
- + Edge-to-edge or tighter spacing patterns should be used
- + Rooms greater than 20 feet wide should not be treated with a single wall of loudspeakers
- + Never aim two wall-mounted loudspeakers directly at each other!

Intelligibility Can Be Obtained When Using Wall-Mounted Loudspeakers!

Graphic and Content Courtesy: NEMA SB 50-2014S © 2014 National Electrical Manufacturers Association & Fire Alarm Audio Applications Guide © 2005 Tyco Safety Products

30 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

Practical Suggestions for Improving Loudspeaker Design

Design Tip 6: Apply the Correct Amplification

- + After loudspeaker layout is complete, clearly note your notification zone boundaries
- + Notification appliance circuits shall NOT extend outside of a notification zone
- + Select your loudspeaker wattage
- + Select your circuit pathway
- + Provide the correct amplification to power each circuit
- + Provide a 25% safety factor for future expansion and field construction changes

Proper Circuiting, Power, and Amplifiers Improve Intelligibility!

New Technology in Loudspeaker Design

Fire Alarm Loudspeaker Commonalities

- + Size: 4" Cone
- + Voltage: 25 Vrms or 70.7 Vrms
- + Frequency: 400 Hz to 4,000 Hz
- + Power: ¼ W, ½ W, 1 W or 2 W
- + Supervisory Voltage for Circuit Integrity

35 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

New Technology in Loudspeaker Design

High Fidelity Loudspeakers

- + Increases Frequency Range!
 - 300 Hz – 8,000 Hz
 - 200 Hz – 10,000 Hz
- + Still Uses 4" Cone
- + Some Caution is Appropriate

36 | Copyright © 2019 Jensen Hughes. All rights reserved.

jensenhughes.com

New Technology in Loudspeaker Design

Loudspeaker Size

- + Better bandwidth for intelligibility
- + Often larger power settings
- + Requires more real estate!
- + Often only for 70V or higher

New Technology in Loudspeaker Design

Wide-Area Outdoor Applications

- + 70 dBA at 2,800 ft.
- + 1600 Watts (4 modules)
- + Unknown Freq.
- + 56" High
- + 266 lbs

- + 70 dBA at 2,800 ft.
- + 1600 Watts (4 modules)
- + 200 – 2,000 Hz.
- + 72" High
- + 320 lbs.

- + 135 dBA Output
- + 74 dBA at 3,938 ft.
- + 1600 Watts
- + 175 – 6,000 Hz.
- + 26.2" High
- + 50 lbs.

- + 70 dBA at 2,880 ft. (360°)
- + 800 Watts (8 horns)
- + 300 – 6,000 Hz.
- + 103" High
- + 208 lbs.

New Technology in Loudspeaker Design

It's Cool to be Omni!

- + Case Study: 450,000 sq. ft. Manufacturing Facility
- + Quoted with standard 15W horn solution
 - 244 15W Cluster Loudspeakers
 - Total Cost \$105,000
- + Quoted with HyperSpike T CPA-Omni
 - 3 T CPA-Omni Loudspeakers
 - Total Cost \$30,000
- + Savings
 - Significantly Less Installation Labor + Material Cost
 - Lower Requirement for Battery Back-up, etc.

New Technology in Loudspeaker Design

New Superior Solution for Reverberant Environments!

- + Applications:
 - Parking Garages
 - Airplane Hangers and Airport Terminals
 - Gymnasiums
 - Atriums
 - Distribution Centers
 - Large Conference Rooms
 - Office Spaces, Cafeterias
 - Corridors & Tunnels

jensenhughes.com

50 | Copyright © 2019 Jensen Hughes. All rights reserved.

New Technology in Loudspeaker Design

New Superior Solution for Reverberant Environments!

- + **How does it work?**
- + It controls vertical dispersion
- + It puts sound where needed – at the listener's ears!
- + It does not put sound where harmful to intelligibility – not adding to harmful reverberation and echoes!

Conventional speaker disperses sound energy horizontally and vertically, prompting reflection.

Directional characteristics of Line Array speaker can be easily controlled, minimizing detrimental reflections.
