Overview:

The GTSA-7 redefines the way users interact with fire alarm systems by combining modern touchscreen technology with an intuitive user experience. Featuring a 7 inch color touchscreen, the GTSA-7 uses icons and color-coded graphics to communicate system status and active events quickly, allowing users to identify critical information with less effort and faster response.

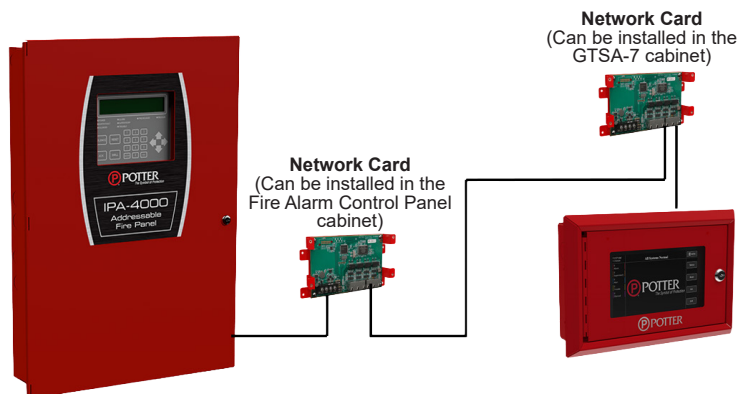

Designed with today's users in mind, the GTSA-7 incorporates familiar touchscreen interactions found on mobile devices. Its intuitive interface reduces the learning curve, minimizes training requirements, and enables facility personnel to navigate the system with confidence. With support for up to 1,000 programmable function buttons, users can tailor control access and organize commonly used functions for faster, more efficient operation.

Fire Alarm Control Panel Connectivity:

Streamlined installation through direct fire panel connectivity is accomplished if the GTSA-7 and the compatible Potter fire alarm control panel are in the same room and within 300 feet of each other.

If the fire alarm control panel and the GTSA-7 are in separate rooms, network cards are required for each. The configuration would be the same as when networking fire alarm control panels together.

Networked Applications:

For networked applications, the GTSA-7 can monitor up to 199 panels on the network, giving users centralized visibility across larger systems. Multiple language options, including English, Spanish, Portuguese, Hebrew, and Arabic, further support diverse facilities and user teams.

Beyond performance, the GTSA-7 complements today's architectural designs. Its sleek, modular design is available in a black enclosure for a refined aesthetic or red enclosure where required by local jurisdictions. Flush and surface mount options provide flexibility to meet the needs of both new construction and retrofit projects.

To further personalize the user experience, the GTSA-7 supports customizable wallpaper, allowing building owners to incorporate company branding, facility graphics, or other approved imagery into the display. This added level of customization helps integrate the fire alarm interface into the overall look and identity of the facility.

By combining modern aesthetics, intuitive operation, installation flexibility, and customizable branding, the GTSA-7 delivers enhanced user experience while helping reduce installation complexity and overall project costs.
